Profile

I build modern AI-powered web applications, SaaS MVPs, landing pages, and interactive dashboards using Next.js, React, Python, SQL, Tailwind CSS, Prisma, and Gemini API. My work focuses on turning ideas into clean, user-friendly, business-ready products with authentication, subscriptions, AI workflows, responsive UI, and polished frontend design.

Skills

-  Programming Languages:
Python, SQL
-  **React, Next.js**, FastAPI/Django,
Prisma, LangChain/Agno AI, Gemini
API, SaaS Development
-  Data Visualization:
Power BI, Streamlit, Dash
-  Cloud Services:
Google Cloud Platform, Azure
-  AI Tools: knowledge of AI and
machine learning concepts
-  Development Environments: Google
Colab, GitHub Codespaces, Jupyter
Lab
-  Data Analysis: Pandas,
NumPy, Matplotlib, Plotly

Education

Master of Computer
Applications (MCA)

Bachelor of Commerce
(B.Com)

Work Experience

Business Analyst

2021- Till Date

As an Admin/Accountant/Analyst at Kalyani Textiles, I managed accounting records, inventory control, and GST-related activities. Generated invoices, financial reports, and utilized Tally ERP 9 for analysis. Ensured smooth daily operations, cash transactions, and administration.

Business Accountant

2017 - 2021

At Phani GST Services, I prepared GST returns, managed bookkeeping, and assisted clients with compliance.

Executive

2014 - 2016

As an Executive at GOLOORY Logistic Solutions, I managed office administration, logistics support, and client coordination, including billing.

Siri Garments, Tirupur

2011 - 2013

At Siri Garments, I managed office inventory, prepared reports, and assisted in cash book and petty cash management.

Projects

ProfessionalLifeStyleShoot – AI-Powered Photography SaaS

- Developed a full-stack web application using Next.js + React, integrating Clerk authentication, Prisma (PostgreSQL), and a Tailwind CSS UI/UX.
- Built dynamic banner ad system (auto timeout, manual close, session-aware) to deliver personalized content based on login status
- Implemented AI image generation (via Gemini API) and image composition, enabling users to create & manage professional lifestyle photo content.
- Created user gallery, upload, and dynamic content delivery pipelines (optimized loading, image management)
- Project link: - [ProfessionalLifeStyleShoot](#)

SnapCook – AI-Powered Smart Cooking Assistant

- Built an AI-powered cooking assistant that generates personalized recipes from user-uploaded images or typed ingredients using Google Gemini API.
- Integrated computer vision and NLP capabilities to analyze food items, estimate nutrition, and suggest context-aware cooking ideas.
- Implemented user authentication and subscription management with Clerk, supporting Free, Pro, and Max pricing tiers.
- Live App → [aisnapcook](#)**

Thumbl - AI-Powered Multilingual Thumbnail Generator

Tech: Next.js 15, React, TypeScript, Tailwind CSS, Gemini API, Clerk, Neon PostgreSQL, Drizzle ORM, ImageKit

- Built a full-stack AI SaaS platform that generates professional social media thumbnails for YouTube, Instagram, LinkedIn, and short-form content formats.
- Integrated Google Gemini AI for thumbnail generation, prompt enhancement, and intelligent context enrichment to improve visual output quality.
- Developed multilingual support for Indian regional languages, enabling creators to generate thumbnails with localized headlines and content styling.
- Implemented customizable design workflows including style presets, aspect ratios, resolution settings, reference image uploads, and auto category detection.
- Live App → [thumbl](#)**

Services I Can Build

AI-powered SaaS

Landing pages for startups and businesses

Admin dashboards and analytics panels

AI chat, image, and document-based tools

Subscription-based web applications

Portfolio and business websites

TradeAnalysis — AI-Powered Trade & Market Analysis Dashboard

Tech: Next.js, React, TypeScript, Tailwind CSS, Neon PostgreSQL, Drizzle ORM

- Built a web-based trade analysis dashboard to explore and interpret market-related data through a clean and interactive interface.
- Developed reusable frontend components and structured application workflows for data visualization and financial insight presentation.
- Integrated database-backed architecture and modern full-stack tooling to support scalable analytics workflows.
- Designed the platform to present business and trading insights in a user-friendly dashboard experience.
- **Live App → [tradeanalysis](#)**

StepWise — AI-Powered Math Learning Platform

Tech: Next.js, TypeScript, Tailwind CSS, Clerk, Gemini API, Neon PostgreSQL, Drizzle ORM

- Built an AI-powered math learning platform that provides step-by-step solutions for typed or image-based math problems.
- Integrated Gemini AI to explain concepts clearly and generate structured learning-focused answers.
- Added image upload, text input, solution history, authentication, and subscription plans to simulate a real SaaS product.
- Designed a clean and responsive interface focused on making math learning more interactive and user-friendly.
- **Live App → [stepwise](#)**

DiffImages — AI-Powered Image Comparison Tool

Tech: Next.js, React, TypeScript, Tailwind CSS

- Built an AI-powered math learning platform that provides step-by-step solutions for typed or image-based math problems.
- Integrated Gemini AI to explain concepts clearly and generate structured learning-focused answers.
- Added image upload, text input, solution history, authentication, and subscription plans to simulate a real SaaS product.
- Designed a clean and responsive interface focused on making math learning more interactive and user-friendly.
- **Live App → [diffimages](#)**

Retail Shop Analysis

- Conducted retail data analysis using Power BI, utilized SQL queries for data insights, and used Seaborn for data visualization.
- Created interactive dashboards to visualize sales, customer behavior, and product trends.
